

LISTING OF CLAIMS

1. (canceled)
2. (currently amended) The method of ~~Claim 1~~ Claim 18 wherein said assigning of a capacity value comprises assigning a value based on the size of the server system.
3. (currently amended) The method of ~~Claim 1~~ Claim 18 wherein said assigning of a capacity value comprises assigning a value based on the number of CPUs in said server system.
4. (currently amended) The method of ~~Claim 1~~ Claim 18 wherein said assigning of a capacity value comprises assigning the value based on published standards for each server.
5. (currently amended) The method of ~~Claim 1~~ Claim 18 further comprising calculating a capacity value from at least one previously-assigned capacity value.
6. (currently amended) The method of ~~Claim 1~~ Claim 18 wherein said assigning of a usage category is based on the server application to be executed at each of said plurality of servers.

7-17 (canceled)

18. (currently amended) ~~The method of Claim 9~~ A method for a computer processor to provide automatic valuation of server-based computer services for each of a plurality of computer server systems comprising the steps of:

assigning a capacity value for each of a plurality of computer server systems;

assigning a usage category for each of said plurality of server systems;

mapping said capacity value and usage category into a matrix;

automatically assigning costs for server-based computer services based on location within said matrix;

ascertaining at least one service support level for said computer services;

mapping each of said at least one service support level into said matrix;

assigning costs for each of said at least one support level in said matrix; and

further comprising the steps, for a specific request for server-based computer services, of:

determining the required usage type, required capacity, and required support level for satisfying said request; and

3

automatically determining charges for requested server-based computer services by aggregating the assigned costs for services from said matrix based on said required usage type, required capacity, and required support level.

19. (canceled)

20. (currently amended) ~~The system of Claim 19~~ A system for providing automatic valuation of server-based computer services for each of a plurality of computer server systems comprising:
assignment component for assigning a capacity value for each of a plurality of computer server systems;
a usage assignment component for assigning a usage category for each of said plurality of server systems;
processor component for mapping said capacity value and usage category into a matrix; and
cost processing component for automatically assigning costs for server-based computer services based on location within said matrix; and
a request handling component for determining the required usage type and required capacity for satisfying a received request for server-based computer services, and wherein said cost processing component automatically determines charges for requested server-based computer services by aggregating the

SMS999-002

automatically assigning costs for server-based computer services based on location within said matrix;

ascertaining at least one service support level for said computer services;

mapping each of said at least one service support level into said matrix;

assigning costs for each of said at least one support level in said matrix; and

wherein said method further comprises the steps, for a specific request for server-based computer services, of:

determining the required usage type and required capacity for satisfying said request; and

automatically determining charges for requested server-based computer services by aggregating the assigned costs for services from said matrix based on said required usage type ~~and~~ required capacity and requested support level.

assigned costs for services from said matrix based on said required usage type and required capacity;

wherein said request handling component additionally determines requested support level and wherein said cost processing component automatically determines charges for requested server-based computer services by aggregating the assigned costs for services from said matrix based on said required usage type, required capacity, and requested support level.

21. (currently amended) ~~The program storage device of Claim 16~~
A program storage device readable by machine, tangibly embodying a program of instructions executable by the machine to perform method steps for a computer processor to provide automatic valuation of server-based computer services for each of a plurality of computer server systems said method steps comprising:

assigning a capacity value for each of a plurality of computer server systems;

assigning a usage category for each of said plurality of server systems;

mapping said capacity value and usage category into a matrix; and
